# EXECUTIVE SUMMARY

## GENERAL INFORMATION

The new Clark PK-8 School is an 87,811 square foot, three story facility constructed in partnership with the Ohio Facilities Construction Commission. The construction is funded through multiple Guaranteed Maximum Price (GMP) agreements.

The GMP 03 Early Electrical Equipment Procurement package has been successful with all components currently installed.

The GMP 04 Hazardous Material Abatement work has been completed and is in the close-out process. A meeting needs to be scheduled to verify the process for both Clark and Gallagher's early package work.

The GMP 06 Demolition and New PK-8 Construction work is under way. The demolition of the existing Clark facility and the adjacent residential properties has been completed, as has all site demolition necessary to facilitate the new building construction.

## PROGRESS

The stormwater detention pond has been constructed and the site storm sewer installation is 95% complete and functional, crews are currently transitioning the pond to the post-construction configuration. Stone staging and lay-down areas are being removed in non-paved areas, paved areas are being graded and prepped for stone subbase placement. Cuyahoga Soil & Water representatives are conducting frequent inspections and GCS continues to monitor and maintain all protections to ensure compliance as the site transitions.

Site security cameras have been removed. The off-duty law enforcement officers will remain engaged on off-hours until the Project is completed.

The site concrete crew has completed removing and replacing the old curbs and sidewalks on the W. 53rd Street entrance drive, W. 56th Street, Train Ave., and have completed the new curbs and sidewalks at the North parking lot and hard surface play area. Crews are currently working on the curbs and sidewalks along Clark Ave. Asphalt paving is scheduled for the end of this month. The masonry crews have completed all interior masonry and brick veneer work and have demobilized. The metal panels have arrived on site and the installation continues. The roofing membrane installation is complete, the building is in the dry in all areas. Roofing detail work and the metal copings and trim installations are nearing completion. The window crews are currently working in Area "A" installing the

final storefront at the East entrance, and have completed the prefabricated window installations in Area's "A" & "B".

Above ceiling MEP rough-in work has been completed on all levels of Area "A". Testing, inspection, and pipe and duct insulation are complete. All air handling units, hydronic pumps, the chiller, and the boilers have been started and are fully operational under manual control. The building is now fully climatized and is maintaining temperature and humidity. Ceiling grid is complete in Area "A", and tiles are installed, along with light fixtures, HVAC diffusers, and other ceiling mounted devices. VCT flooring has been completed on the second and third floors, and is mostly completed with the exception of the main corridor on the first floor. Floor waxing and final cleaning has commenced on the third floor. Casework installation is ongoing, metal lockers are installed, and other wall mounted items such as monitor mounts, markerboards and tackboards are underway. Wood doors are onsite and being installed, and the technology systems are being assembled in each floor's tech closets. Ceramic tile installations have also been completed in all areas, and plumbing fixture installations are progressing. The elevator installation has begun after a delay in the initial delivery.

Area "B" MEP above ceiling rough-in work is completed and finishes are underway. The hydronic piping mains, domestic water mains, gas piping mains, and electrical distribution conduits have been installed, and all major equipment is in place and operational. The generator, primary service transformer, and chiller have been set in the mechanical enclosure, and all main switchgear has been installed. The building is fully energized under permanent power and all temporary systems have been removed. Ceiling grid installation is ongoing and ceiling tile installation continues, finish coat painting is ongoing as well. The Gymnasium has been finish painted, the athletic equipment installed, and the wood flooring has been completed, striped and sealed. The kitchen equipment is being installed and the cooler and freezer have been completed.

## UTILITIES

All permanent utility systems are up and running, there are no other utility issues or concerns to report at this time.

## SCHEDULE

After the recent delays and subsequent recovery efforts that brought the Project back to 0 negative float, the early June update showed the Project at -14 days negative, and as of this update the schedule has improved slightly and is now showing

-6 days float. GCS continues to work with our scheduling consultant with frequent updates to identify the impacts so corrective measures can be implemented to recover the time. Crews are continuing overtime work in critical areas, and will continue to do so as needed.

Please reference the updated schedule, included in this report.

#### **BUDGET**

Please reference the Cost Report for further information.

#### **REQUEST FOR INFORMATION (RFI) AND SUBMITTALS**

Please reference the RFI and submittal logs included in this report.

#### **DIVERSITY BUSINESS ENTERPRISE PROGRAM**

Please reference the tracking log included in the report.

#### **WORKFORCE PARTICIPATION AND CONSTRUCTION TRADES**

Please reference the tracking log included in the report.

RFI #	Subject	Status	RFI Stage	Responsible Contractor	Ball In Court	Date Initiated	Due Date	Questions	Responses
136	Ceiling at Coiling Grill	Open	Course of Construction	Greenspace Construction Services, LLC	Sarah Klann	06/13/2025	06/20/2025	Bulletin 21 lowered the coiling grills in the kitchen to avoid a conflict with the structural steel. The door opening was built down to accommodate the lower door but the ceiling in the kitchen was not addressed. Since the was above the ceiling there is no hood covering the coil. Plus, the motor projects out past the coil into the room. See attached. Solution: A portion of the ceiling needs to be lowered under the coil and the motor so that is concealed above the ceiling. Since the motor and coil need to be accessible, an ACM grid system would be beneficial. The section of ceiling that needs lowered does have light fixtures in it so their layout will need to be adjusted also.	
137	Sign/Plaque Clarifications	Open	Course of Construction	Greenspace Construction Services, LLC	Sarah Klann	06/19/2025	06/26/2025	1. Please provide the content and sign locations for these sign type? They didn't have this information yet when we produced the rest of the signage, so I held off on production on this sign. Please advise if they can provide this. 2. Also, do you have any information on the acrylic portion of the LEED plaque? When will that information be provided?	
138	Door 1C4	Open	Course of Construction	Lakeland Electric, Inc.	Sarah Klann	06/20/2025	06/27/2025	Door 1C4 the A to B hall connector door is called out to have electronic access control. The door frame that is set is not the correct frame for electronic access and is filled with concrete, preventing us from getting wire down it. The surrounding walls also appear to be filled with concrete as well. Please advise.	
139	Room 324 AV/T Location	Open	Course of Construction	Lakeland Electric, Inc.	Sarah Klann	06/23/2025	06/30/2025	In room 324 (project lab) there is a video monitor location. We have the location cabled and monitor installed however there isn't an AV/T location in the room. We will need an area they would like the location so that we can set the amplifier for the sound reinforcement as well as the other end of the cabling from the monitor.	
140	Grades for concrete ADA Parking Stalls	Open	Course of Construction	Platform Cement, Inc.	Sarah Klann	06/24/2025	07/01/2025	Please provide grades for these concrete ADA parking stalls in east parking lot? See attached. I presume they need to be less than 2%.
