

SECTION X

REINSPECTION AND PERIODIC SURVEILLANCE PLAN

X-A PLAN FOR BUILDING REINSPECTION (763.85 b)

At least once every three (3) years after the Management Plan is in effect (time of delivery to school Principal), the District shall conduct a reinspection of all friable and nonfriable known or assumed asbestos containing building material.

In an effort to comply with the reinspection date, the Asbestos Office has developed a computerized "time-task calendar" in which the computer shall generate an appropriate date to meet the three year mandatory time frame. Daily management of the time-task calendar shall notify the Management Planner in a timely manner when the reinspection should be accomplished.

X-B PLAN FOR ASBESTOS OPERATIONS AND MAINTENANCE ACTIVITIES (763.91)

The Districts in-house asbestos crew has already implemented; and shall continue to maintain, an operations, maintenance, and repair (O&M) program if feasible, whenever any friable ACBM was present or assumed to be present.

The Operations and Maintenance program is generated by the custodial work order system as previously defined.

The user of this Document may use the individual "room survey forms" found in Section IV, Management Plan/Operation and Maintenance Section, to find whether past work was performed in a room or if future work shall be scheduled.

X-C PLAN FOR PERIODIC SURVEILLANCE AND REPORTING (763.92 b) (763.94 d,e)

The District shall conduct, at least once every 6 months, a periodic surveillance of each school that has been inspected. The surveillance shall

consist of visually inspecting all areas that are identified in this Management Plan as containing ACBM or assumed ACBM. A record of the date of the surveillance, inspectors name, and any changes in the material since the last inspection or surveillance.

Upon completion of the surveillance, the Asbestos Program Manager shall carry out the Districts responsibilities under 763.84 and send a copy of such record for inclusion to this Management Plan.

The scheduling of the surveillance shall be identified by the "time-task calendar" and shall indicate by a computer spread sheet when a 6 month surveillance of this building should be completed.

X-D

PLAN FOR MODIFIED CLEANING PROCEDURES (763.91 c)

The District is prepared to perform recommended cleaning of all areas of the school building where friable ACBM, damaged or significantly damaged thermal insulation, or friable suspected ACBM is present. Cleaning shall be performed before the initiation of any response action scheduled on "survey forms" in Section IV.
